

BMSE3343 Agile Software Development Tutorial 3 & 4

Reminder: Prepare the answers for the following questions before the tutorial class

1. Your software development team is in charge of a project which involves the development of an e-Learning Management System for a private university.

Apply the INVEST model and write **five** appropriate user stories for the e-Learning Management System.

2. Consider the following user story for an e-Learning Management System:

“As an instructor, I can manage my course.”

(a) Assess whether the given user story fulfils the criteria of the **INVEST** model.

(b) Use an appropriate pattern to improve the given user story. Include a description for the pattern that you applied and rewrite the improved version of user stories.

3. You are a member of an agile team developing Fitness App. The main aim of the app is to provide a set of routine exercises. Users can create or adopt new training plans. Additionally, the app can be in sync with fitness tracker and provide personalized health recommendations for a user.

Outline **FIVE (5)** user stories that could be deployed within 2 weeks and that would deliver some real value to the customer independently of the other stories.

4. Imagine you are part of a development team building a ride-sharing app. The core feature is the ability for the riders to request ride and drivers to accept them.

Outline **FIVE (5)** user stories that could be deployed within 2 weeks and that would deliver some real value to the customer independently of the other stories.

5. A team is working on a project to develop a web application for a travel agency. The Product owner has provided the following user story:

“As a customer, I want to be able to book flights, hotels, and rental cars, so that I can plan and book my entire trip in one place”.

Examine this story against the **INVEST** criteria and suggest improvements if necessary.

6. You are the product owner of a team developing a new mobile app for a travel company. The app is designed to enhance travel experience by offering various features, including booking flights and hotels, providing destination guides, and facilitating social interactions among travelers.

Outline **FIVE (5)** user stories that could be deployed within 2 weeks and that would deliver some real value to the customer independently.

BMSE3343 Agile Software Development Tutorial 3 & 4

7. Your team is developing an **online grocery shopping app**. The app currently allows users to browse items, add them to a cart, and complete purchases. However, many users have complained that they often forget to buy recurring items like milk, eggs, or bread. To address this issue, the team has decided to implement a **shopping list reminder feature** that allows users to save frequent items and receive automatic reminders before they run out.

Based on the scenario above, write **FIVE (5) user stories** that support the development of the **shopping list reminder feature**. (10 marks)

8. You are a vital part of an agile team dedicated to crafting a state-of-the-art Delivery Tracking System for a company. This system serves as a dynamic platform meticulously designed to oversee, control, and deliver real-time insights into the status and precise location of shipments or deliveries.

Outline **FIVE (5)** user stories that could be deployed within 2 weeks and that would deliver some real value to the customer independently of the other stories. (10 marks)
